

# GIVE YOUR SPRAYS THE EPIC TREATMENT

Campbell

## FilmStar-21<sup>®</sup>

Non-ionic extender, sticker and spreader.

### Directions for use extract

PURPOSE	RATE	CRITICAL COMMENTS
As a sticker	300mL/ha	Use up to the normal pesticide cut-off time
As a spreader	300mL/ha	Use up to the normal pesticide cut-off time
As an extender To extend the time between sprayings of some pesticides by up to 7 days * * This is a guide only. The actual length of extension may vary depending on the type of pesticide used and climatic conditions after application..	1.2L/ha	Do not apply FilmStar-21 within 30 days of harvest of food unless under specific spray applications. <b>SPECIFIC APPLICATIONS CAUTION:</b> FilmStar-21 can be used with copper fungicides and tolerance exempt pesticides on food crops right up to harvest. The use of FilmStar-21 on tolerance exempt pesticides close to harvest may result in visible residues on crops that may render them unsaleable. If this becomes a problem, the rate of FilmStar-21 should be reduced or stopped altogether.

# FilmStar-21<sup>®</sup>

Non-ionic extender, sticker and spreader.

## FEATURES OF FILMSTAR-21

### STICKING:

FilmStar-21 is a natural adhesive that minimises loss of product from irrigation, rain, and dew. FilmStar is made from the natural ingredient called pine resin. FilmStar forms an elastic film that encapsulates and holds the pesticide onto your target area.

### SPREAD:

FilmStar-21 helps the pesticide distribute evenly over the leaf surface. Filmstar comes into its own with better being able to wet plants with a hairy or waxy surface

### EXTEND:

FilmStar-21 protects against UV light, as some chemicals especially contact fungicides and insecticides break down in UV light. This is especially true with biological insecticides as they tend to break down very quickly in Australia's climate. The addition of FilmStar-21 will greatly reduce this.

FilmStar-21 is compatible with most insecticides, fungicides, foliar fertilisers and pesticides.

FilmStar-21 is rainfast within 1-2 hours depending on weather conditions.

### Best use of FilmStar-21

- Add FilmStar-21 to the spray tank as the last ingredient.
- Pre mix Filmstar-21 before adding to the spray tank.
- Add FilmStar-21 to the spray tank as it is filling, with the agitator running.
- 

### Cleaning requirements

- A tank cleaner is advisable to use
- Rinse tank, lines and nozzles with water immediately after spraying.
- After rinsing, there may still be a small amount of sticky residue in the tank.
